SUMMARY

The 2020 Census is officially underway. Every person in the 26th District of Florida must be counted. The Census is used to distribute over $1.5 trillion in federal funding. An incomplete count could cost the district its fair share of that funding. Missing just one person in the district could reduce health care funding by $946 per year, education funding by $1,290, and job training by $983.

WHY THE CENSUS MATTERS TO YOUR COMMUNITY

The Constitution requires the federal government to count every single person living in the United States every ten years.¹

Data collected by the Census is used to determine how much funding your community receives for critical services like education, medical care, foster care, roads, public transit, and job programs. Census data also helps local governments enhance public safety and prepare for emergencies.² In fact, more than $1.5 trillion in federal funding is distributed based on Census data in 316 different community programs.³ Finally, Census data also helps determine representation in Congress and in state and local governments.

An accurate Census count matters to everyone in your community. To ensure that your community has the resources it needs for the next decade, it is critical that every person in your district is counted in the 2020 Census.

Responding is Quick, Easy, and Online

People can respond to the Census online, by phone, or by filling out a paper form mailed right to your home by the Census Bureau.⁴ The 2020 Census only has 12 questions. The 2020 Census does not ask about citizenship.⁵

Due to the coronavirus crisis, the Census Bureau has urged people to fill out the Census online and has extended the time period for online submissions. Doing so will help everyone maintain essential social distancing. Responding online takes only minutes and saves Census Bureau employees the trip to your home. To respond online, go to https://my2020census.gov. If you cannot respond online, simply call 844-330-2020.

Census Data is Private and Confidential

The illegal disclosure of any personal Census data is a federal crime punishable by a $250,000 fine and up to five years in prison.⁶ The Census Bureau is barred from releasing an individual’s information to anyone, including law enforcement, immigration officials, or even your landlord.⁷
Risk of an Undercount in Your Community

In the last Census in 2010, 16 million people were not counted. We know this because after the 2010 Census, the Census Bureau surveyed a sample of households around the United States, compared the information to actual Census responses, and then estimated the amounts of error.  

The 2010 Census undercounted African Americans by approximately 2.1%, Hispanics by 1.5%, American Indians and Native Alaskans living on reservations by 4.9%, and Native Hawaiian and Pacific Islanders by 1.3%. Approximately 4.6% of children under the age of 5 were uncounted in 2010.

Experts fear that an undercount in 2020 could be even larger.

Based on data from the 2017 American Community Survey, if minorities in this district were undercounted by the same percentage as they were nationally in 2010, the 2020 Census would miss:

- Over 1,750 African Americans;
- Over 7,450 Hispanics;
- Over 130 American Indians and Native Alaskans; and
- Over 2,150 young children.

Some communities have particularly low Census response rates. Approximately 18% of people in the district live in communities that were hard to count in the 2010 census.

People without internet access are also more likely to be missed. Approximately 14% of households in the district have no access to internet.

The Cost of an Undercount to Healthcare Programs

An accurate Census count is crucial to ensure that families in your community get the healthcare they need. The Department of Health and Human Services (HHS) uses Census data to distribute more than $250 billion in funding each year for programs like Medicaid, the Children’s Health Insurance Program (CHIP), and foster-care support. These programs are critical to the district:

- About 164,000 people receive Medicaid in the district. In 2017, $580 million in federal funding went to help with Medicaid payments.
- About 10,700 children in the district are enrolled in CHIP. In 2017, $25 million in federal funding went to help fund CHIP.
- In 2015, $170 million in federal funding was granted to the state as part of the foster care assistance program, which helps provide safe and stable conditions for
children in foster care. In 2017, 98 children in the district were enrolled in foster care.

Each person who gets counted in the 2020 Census brings in about $946 per year in funding for Medicaid, CHIP, and foster care assistance programs in the district.

If there just is a 1% undercount in 2020, the district could lose more than $6.5 million in federal funding.

**The Cost of an Undercount to Education**

An accurate Census count is critical to funding your community’s schools. The Department of Education distributes grants to schools that have a high proportion of low-income students as determined by Census data. This funding is crucial for schools in the district:

- About 30,000 school-aged, low-income children live in the district. In 2017, $39 million of Title I funds went to schools in this district, which helped to supplement school budgets.

For every low-income student who gets counted, schools in the district will receive $1,290 in federal funding.

If there is just a 1% undercount in 2020, the district’s schools could lose over $390,000 in federal funding. This is the equivalent of all the textbooks that 1,562 students would need in a school year.

**The Cost of an Undercount to Job Programs**

The Department of Labor distributes grants to fund assistance programs for job seekers based on Census data. These programs include training for specific skills and jobs, mentoring and apprenticeship, career counseling, and assistance with jobs searches and relocation. This funding is important for workers in the district:

- About 127,000 adults and working age youths live under the federal poverty level in the district. In 2017, $19 million in federal funding went to worker assistance programs in the District.

For every low-income worker who gets counted, these programs will receive $983 in the district.

If there is just a 1% undercount in 2020, the district could lose more than $1.2 million in federal funding.
This report is based on data from the following sources:

- “2017 American Community Survey” from the U.S. Census Bureau;
- “Counting for Dollars 2020: The Role of the Decennial Census in the Geographic Distribution of Federal Funds” from the George Washington University Institute of Public Policy;
- “Federal and State Share of Medicaid Spending” from the Kaiser Family Foundation;
- “State Medicaid and CHIP Applications, Eligibility Determinations and Enrollment Data” from Centers for Medicare and Medicaid Services;
- “Total CHIP Spending” from the Kaiser Family Foundation;
- “FY2019 Congressional Budget Justification, State Table—Title IV-E Foster Care” from HHS;
- “Census Project” from the Project on Government Oversight;
- “Census 2020 Hard to Count Map,” from the City University of New York Mapping Service; and
- “Updated Data for Persons Defined as Disadvantaged Youth and Adults” from the Department of Labor.

Estimates of the impact of the 2020 Census on federal funding for the district are based on a methodology from Co-Equal.
